ScopTEL RTP 'directmedia' Handling

What is directmedia?

- When SIP initiates the call, the INVITE message contains the information on where to send the media streams. ScopTEL uses itself as the end-points of media streams when setting up the call. Once the call has been accepted, ScopTEL sends another re-INVITE message to the clients with the information necessary to have the two clients send the media streams directly to each other.
- The 'Can Reinvite' option is used to enable directmedia options per peer in the ScopTEL GUI

What is a SIP re-INVITE

For more information you should reference this documentation at

- <https://wiki.asterisk.org/wiki/display/AST/SIP+Direct+Media+Reinvite+Glare+Avoidance>

The RFC can be found here

- <https://tools.ietf.org/html/rfc3261#section-14>

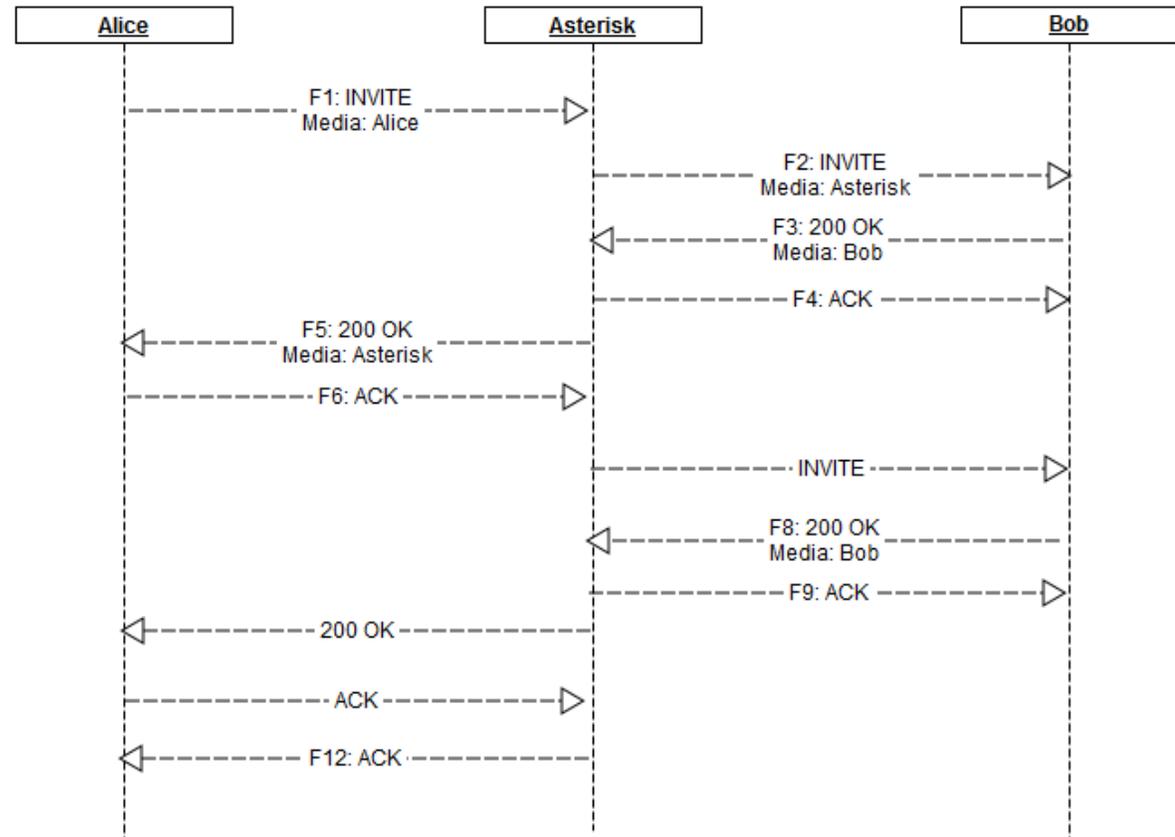

Sample Call flows can be found here

- <https://tools.ietf.org/html/rfc3665>

Directmedia/re-INVITE Overview

- When SIP endpoints communicate by way of ScopTEL, ScopTEL will attempt to send SIP re-INVITES in order to allow the endpoints to communicate directly. This allows for the computational load on the ScopTEL server to be decreased while also lessening the latency of the media streams between the endpoints. With directmedia enabled typical SIP traffic for a call might look like this.

Caveats

- ScopTEL tries to re-INVITE media streams to an optimal path. If there's no reason for ScopTEL to stay in the media path the media will be redirected. This does not really work well in the case where ScopTEL is outside and the clients are on the inside of a NAT. In that case, you want to set `directmedia=nonat`
- If ScopTEL and the clients are on the same subnet then there is no value in enabling `directmedia` since conserving bandwidth is not an issue
- If one device is on a different side of a NAT device than another phone or ScopTEL, you can't allow `directmedia` for that device.
- If the clients use different CODEC's, ScopTEL will not issue a re-invite.
- If the Dial() command contains "k", "K", "t", "T", "h", "H", "w", "W" or "L" (with multiple arguments) ScopTEL will not issue a re-INVITE. Therefore these features are not supported when `directmedia` is invoked:
 - tT Allow DTMF Transfer
 - hH Allow to hangup using * key
 - wW Allow to Record call (automon)
 - L Limit the call to 'x' ms
 - kK Allow Call Park DTMF feature Code

Additional Caveats

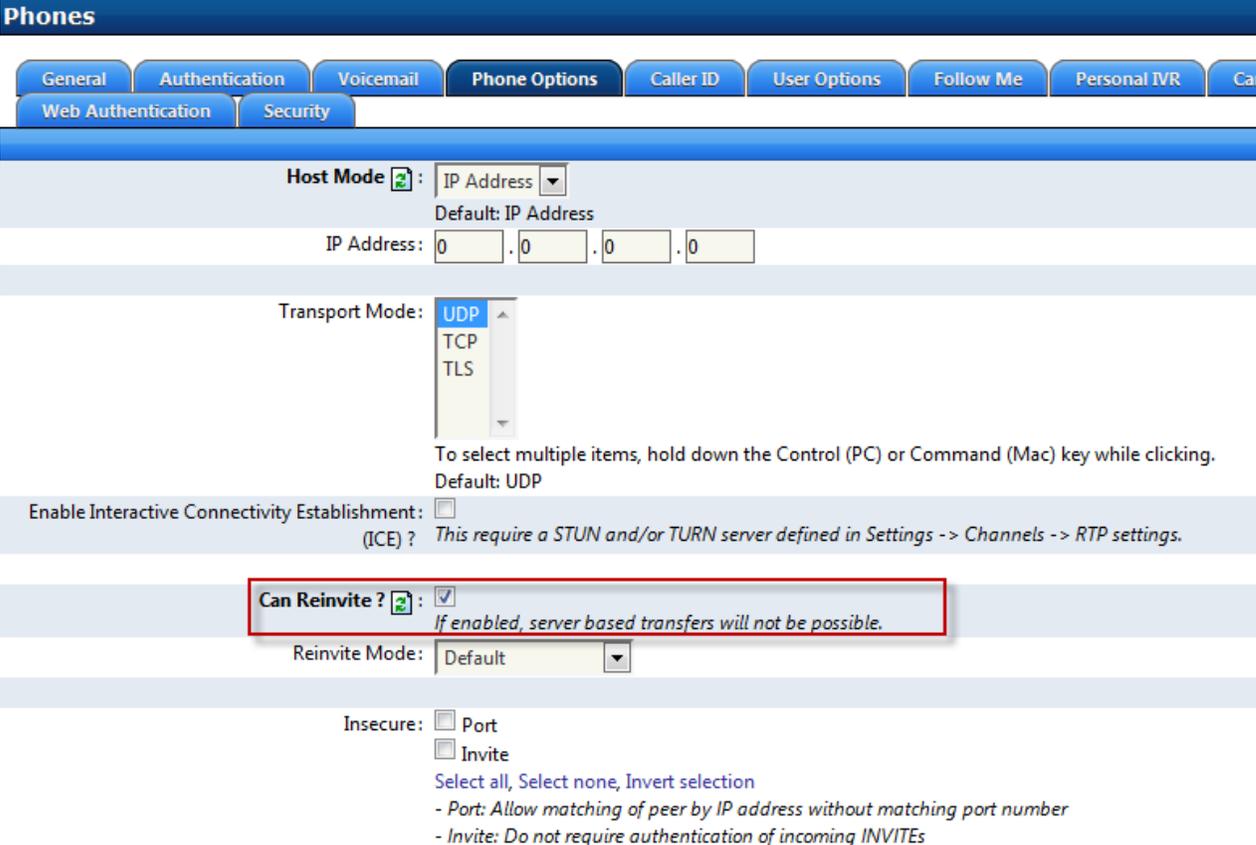

- When choosing which peers to set this option on, you should be careful. It is best to only set this option on peers that are also under your control and that will also have this option set. For instance, if your setup has multiple peered ScopTEL servers, then it is a great idea to use this option for those peers. If, on the other hand, you have had SIP re-INVITE glare issues with a SIP provider, then you should be hesitant to set this option without thoroughly testing with your provider first.
- When setting `directmedia = outgoing` on your peered ScopTEL servers, it is a good idea to set the option for ScopTEL servers in question. This way calls can go from any ScopTEL server to any other ScopTEL server and glares will be prevented.

How to enable directmedia/re-INVITES in the ScopTEL GUI per Extension

Navigate to an extension and edit the Phone Options and find 'Can Reinvite' and enable it.

Several Modes become available from the drop list. Refer to the following documentation to decide which mode to use.

Phones

General Authentication Voicemail **Phone Options** Caller ID User Options Follow Me Personal IVR Call Forwarding

Web Authentication Security

Host Mode : IP Address
Default: IP Address
IP Address: 0 . 0 . 0 . 0

Transport Mode: UDP
TCP
TLS
To select multiple items, hold down the Control (PC) or Command (Mac) key while clicking.
Default: UDP

Enable Interactive Connectivity Establishment:
(ICE) ? This require a STUN and/or TURN server defined in Settings -> Channels -> RTP settings.

Can Reinvite ? : *If enabled, server based transfers will not be possible.*

Reinvite Mode: Default

Insecure: Port
 Invite
Select all, Select none, Invert selection
- Port: Allow matching of peer by IP address without matching port number
- Invite: Do not require authentication of incoming INVITES

How to enable directmedia/re-INVITES in the ScopTEL GUI per Extension

Navigate to an extension and edit the User Options and find 'Enable Native Bridging' and enable it.

This will prevent any invalid Dial commands from being executed and disable some unsupported features such as call monitoring.

The screenshot shows the 'Call Options' configuration page in the ScopTEL GUI. The 'Enable Native Bridging' checkbox is checked and highlighted with a red box. Other options include:

- Language: Default
- Default Extension ring time: Use Global Ring Time (Default: Use Global Ring Time)
- Disable Hint / Extension State ? : (If checked, we will not monitor the state (unavailable, in-use, busy, ringing, etc) of all specified extension(s).)
- Playback a message to Caller if Extension is already in use ? :
- Ring on additional extension(s) ? : (This feature is not supported when using Agent or Hotdesk extension.)
- Volume Gain (RX/TX) (Incoming Calls): 0 0
- Provide Music on Hold until answer ? :
- Music On Hold: default (debcomainbtn)
- Background Music: debcomainbtn (debcomainbtn)
- Include Personal Directory: General (with a 'Select' button)
- Enable Native Bridging ? : (highlighted with a red box)
- Enable 'Privacy Manager' ? :
- Enable Fax Detection ? :

How to enable directmedia/re-INVITES in the ScopTEL GUI per VoIP Interface

Navigate to a VoIP Interface and edit the Network Options and find 'Can Reinvite' and enable it.

Several Modes become available from the drop list. Refer to the following documentation to decide which mode to use.

VoIP Accounts

General Server **Network** Options Billing Incoming Calls Outgoing Calls

Transport Mode: UDP

Trunk behind NAT ?

Enable Interactive Connectivity Establishment (ICE) ? *This require a STUN and/or TURN server defined in Settings -> Channels -> RTP settings.*

Enable Outbound Proxy support ? *When enabled, the server will send outbound signalling to the specified server, not directly to devices.*

Can Reinvite ?

Reinvite Mode: yes (Default)

Insecure: Port Invite
Select all, Select none, Invert selection
- Port: Allow matching of peer by IP address without matching port number
- Invite: Do not require authentication of incoming INVITES

Enable SRTP encryption ? *Calls will fail with if the peer does not support SRTP. Defaults to no.*

Qualify ? *Default: True*

Qualify Time (in ms): 300 *Default: 300*

Qualify Frequency (in seconds): 60 *Default: 60*

Keepalive Interval: *Interval at which keepalive packets should be sent to a peer (value in seconds).*

directmedia=yes

ScopTEL by default tries to redirect the RTP media stream to go directly from the caller to the callee. Some devices do not support this (especially if one of them is behind a NAT). The default setting is YES. If you have all clients behind a NAT, or for some other reason want ScopTEL to stay in the audio path, you may want to turn this off. This setting also affect direct RTP at call setup (a new feature in 1.4 - setting up the call directly between the endpoints instead of sending a re-INVITE). Additionally this option does not disable all reINVITE operations. It only controls ScopTEL generating reINVITEs for the specific purpose of setting up a direct media path. If a reINVITE is needed to switch a media stream to inactive (when placed on hold) or to T.38, it will still be done, regardless of this setting. Note that direct T.38 is not supported.

directmedia=nonat

An additional option is to allow media path redirection re-INVITE but only when the peer where the media is being sent is known to not be behind a NAT (as the RTP core can determine it based on the apparent IP address the media arrives from).

directmedia=update

Yet a third option... use UPDATE for media path redirection, instead of INVITE. This can be combined with 'nonat', as 'directmedia=update,nonat'. It implies 'yes'.

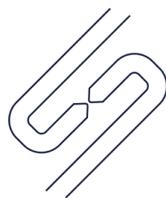

directmedia=outgoing

When sending directmedia reinvites, do not send an immediate reinvite on an incoming call leg. This option is useful when peered with another SIP user agent that is known to send immediate direct media reinvites upon call establishment. Setting the option in this situation helps to prevent potential glares. Setting this option implies 'yes'.
