- Port number is 465
- Authentication Method is PLAIN
- Use TLS is True
- Use STARTTLS is False

The screenshot shows the 'SMTP Settings' tab in the ScopTEL IP PBX configuration interface. The page has a navigation bar with tabs for 'General', 'Provisioning', 'Proxy Settings', 'SMTP Settings', 'Performance Tuning', and 'Security (SSL)'. The 'SMTP Settings' tab is active. Below the navigation bar, there is a section for 'Enable 'Smart Relay' for Outgoing SMTP?' with a checked checkbox and a warning message: 'If you make any changes to this section you must do a commit on the Telephony module to apply the changes.' Below this, there are three rows of settings: 'SMTP Server' set to 'smtp.gmail.com', 'Port' set to '465' with a note 'If you are using TLS, the port must be set to 465.', and 'Mail Domain (EHLO)' set to 'gmail.com' with a default of 'localhost'. A section titled 'Authentication' follows, containing: 'Username' set to 'user@gmail.com', 'Password' masked with dots, 'Authentication Method' set to 'PLAIN' (with a default of 'On (Automatic Detect)'), 'Use TLS?' checked (with a default of 'True'), 'Use STARTTLS?' unchecked (with a default of 'True'), and 'Sender Email' set to 'user@gmail.com' (with a default of 'scopserv@localhost'). At the bottom of the form are 'Save' and 'Cancel' buttons.

Gmail Settings

- <https://support.google.com/accounts/answer/6010255?hl=en>
- Gmail has implemented an additional security for native Gmail accounts that affect the SMTP Smart Relay method.
- To work around this issue you must change your Gmail account settings to 'Allow less secure apps: On'
